

Food Retail Labeling

The only thing we're not flexible about with our food retail labels is their quality.

ITW Labels offers an incredible range of high-quality food retail labeling options. We are your single-source provider for weigh scale, merchandising, shelf-marking and distribution labels. You can be confident that our labels will look good and scan well. So whatever you want labeled, we have you covered.

Food retail labeling products include:

Weigh scale

All weigh scale labels are not the same. Designed for both Hobart and non-Hobart equipment, our labels are made to meet scale manufacturer specifications. With ITW labels, you'll have fewer jams, more accurate scans, longer printhead life and labels that will work through the widest temperature ranges and environments.

We are the only Hobart-branded weigh scale label manufacturer.

Merchandising

We will work with you to design an eye-catching label to help you build your brand. High-quality graphics, short turn-around times and flexible order quantities make ITW Labels the ideal choice.

Shelf Marking

We have products for sheeted laser and thermal transfer that print superbly, lie flat in freezer environments and remove cleanly from shelving. Our many patents include Image Bond® topcoat for enhanced laser printing and a specialty shelf-talker design.

Distribution

Distribution labels are often used behind the scenes, but that doesn't mean they're not important. At ITW Labels, we offer the same high quality and outstanding customer service on all of our product lines.

Reliability that really performs.

- Fewer jams: Our labels don't jam as often, thanks to high-quality adhesive, coated cores and two-sided tape—all of which provide for a consistent and clean release in weigh wrap systems.
- Premium quality paper: We use premium face stock that's bright white for improved clarity and better scanning. Our high-sensitivity face paper and top coat combine for improved printing.
- Longer printhead life: Our high-sensitivity face paper and topcoat significantly reduce printhead wear.
- Proven adhesive under demanding conditions: Our food-grade labels are specifically designed to adhere to glass, plastic, poly, wax and board through a wide temperature range.
- Resistant to food retail challenges: ITW labels are noted for withstanding extreme environmental conditions, including moisture, plasticizer migration, oils, fats, blood, alcohol, solvents and heat.
